

## **Physics Program Learning Outcomes**

### **Mission**

The mission of the Physics Program is to provide students with rigorous training in theoretical and experimental physics in order to prepare them for graduate school or careers in teaching or industry.

### **Learning Outcomes**

Graduating physics students will:

1. Acquire a solid foundation in the theory and application of classical and modern physics
2. Develop excellent critical thinking and problem solving skills specifically related to physics
3. Communicate clearly about ideas, theories and methods related to physics
4. Acquire skills in accessing and interpreting physics literature
5. Secure physics-related jobs and/or gain acceptance in graduate programs
